REŠENJA ZADATAKA

1. a) $I_{D1} = 103\mu\text{A}$; $V_I = 2.02\text{V}$ $I_{C2} = 1.1\text{mA}$.

b) $a = \dfrac{v_i}{v_u} = \dfrac{g_{m1}R_1}{1+g_{m1}R_1}\cdot\left(-g_{m2}R_3\right) = -96.6$.

4. a) $R_2 = -R_1\left(1+\dfrac{V_P}{V_Z+V_{EB}}\right) = 1.25\text{k}\Omega$.

b) $v_P = -5\text{V} = const$, za $0 \le i_P \le I_{PMAX}$;
$i_P = I_{PMAX} = const$, za $-5\text{V} \le v_P \le 0$.

c) $I_{PMAX} = -\dfrac{P_{DQ1\max}}{V_{EB}+V_u} = 0.8\text{A}$; $R_S = \dfrac{V_{EB}}{I_{PMAX}} = 0.875\Omega$.

d) $R_{0\max} = \dfrac{V_P - 2V_{EB} - V_u}{I_{Z\min} + \dfrac{I_{PMAX}}{\beta_{F1}}} = 560\Omega$.
